ACTIVITIES CONDUCTED:

SL.NO	Date	Event	Place	No of Volunteers	Page No.
1	8-10-2021	a) Cleaning the campus	KLE Institute of Dental Sciences College and Hostel Campus	25	3-4
2	8-10-2021	b) Planting the saplings	Campus of KLE Institute of Dental Sciences College	15	4-6

1. Cleaning of the campus:

The activity commenced with dividing the NSS volunteers in teams of 4 (5 members each team) for cleaning the campus premises which was under 4 sections for ease of execution.

- Parking area – 2-wheeler
- Parking area – 4-wheeler
- KLEDS bus stop
- College entrance

- ❖ NSS Volunteers were involved in this cleanliness drive by collection of dry waste in the above five said locations.
- ❖ Banners/ Placards were used to create awareness about cleanliness among general public when the activities were conducted near bus stop and outside college premises.
- ❖ Distribution of garbage cans near the bus stop next to the institution was done, which would be maintained by the college & routine waste disposal will be carried out every day by the college.

TWO - WHEELER PARKING AREA

FOUR- WHEELER PARKING AREA

COLLEGE ENTRANCE

OUTSIDE KLEDC BUSTOP

ACTIVITY II – PLANTING OF SAPLINGS

Ten sets of saplings were purchased and planted at the entrance of our college premises. Positive responses were received and all volunteers showed great interest in this activity.

CAMP REPORT

Date- 20/11/2021

Venue- True Light International Orphanage

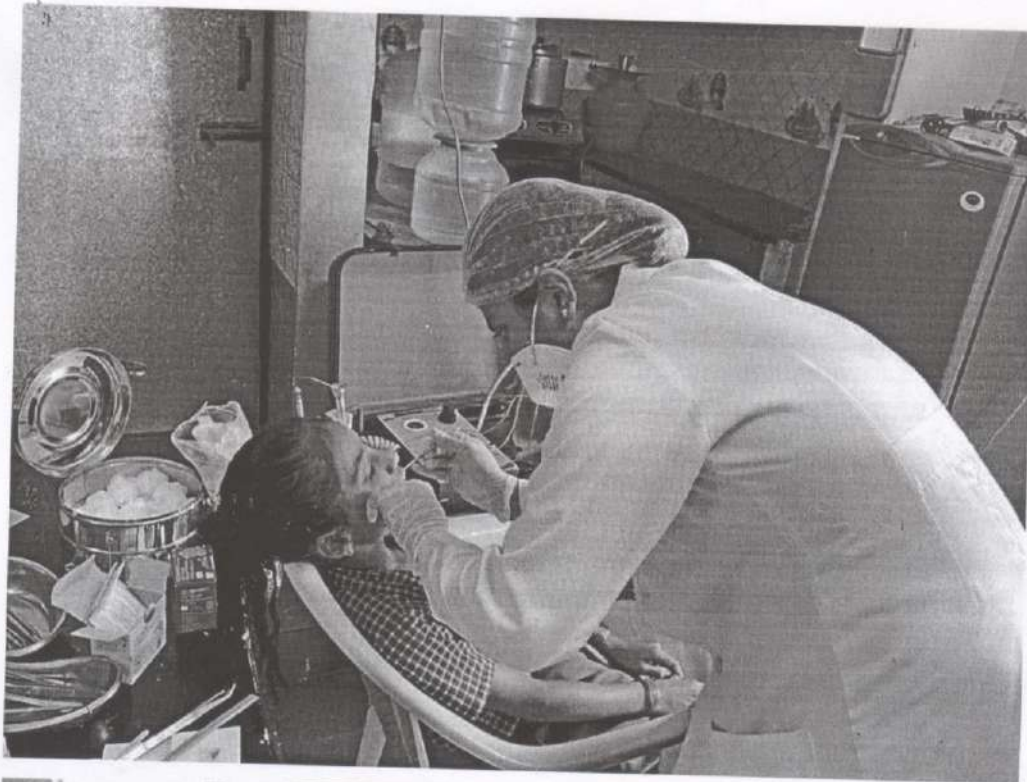

As a part of Children's Day celebration, a screening and treatment camp was organised by the Department of Pediatric and Preventive Dentistry at True Light International Orphanage located in Ambedkar Nagar, Bengaluru on 20th November 2021. The team of doctors included staff – Dr Madhu K, Dr Srinivas L S, Dr Ravi Kumar S, Post Graduate students – Dr Inzar, Dr Harshini and Interns Dr Mark and Dr Keerthana. The orphanage housed a total of 16 children who ranged in age from 8 years to 15 years. Preventive and primary treatment was successfully given to all inmates. The camp started with information on oral hygiene maintenance and demonstration of brushing techniques followed by a thorough preliminary oral examination of all the children. All 16 children received topical fluoride application while other treatments like pit and fissure sealants, preventive resin restorations and other conservative restorations were done only in children requiring them. The camp successfully concluded with another session of oral health care instructions and thanks giving.

Oral Cancer Control Program

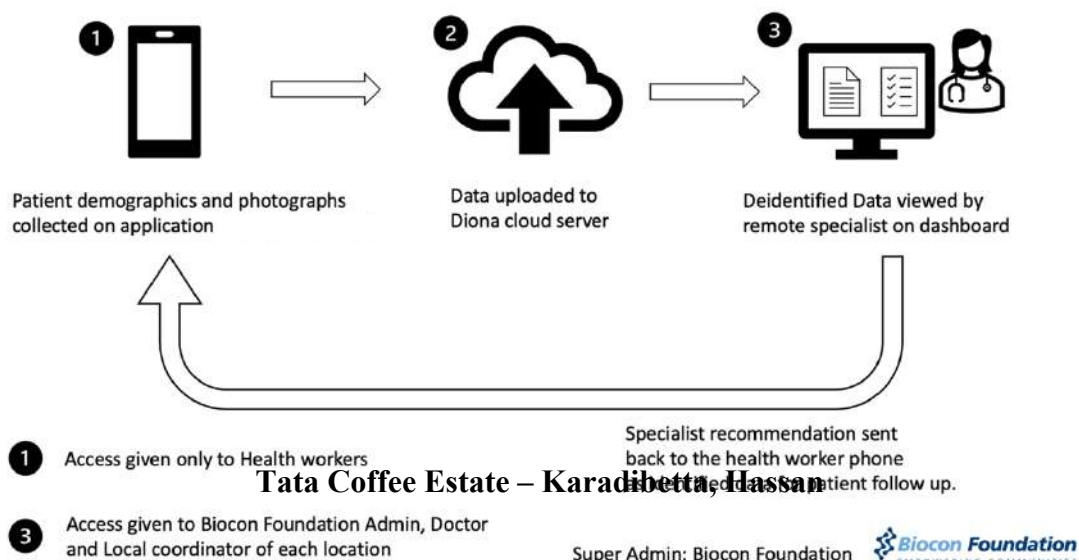

Approach:

Biocon Foundation has implemented integrating health and technology by a mobile health (mHealth) approach from a decade to improve the ability of **Frontline Healthcare Providers** (FHPs) in low- resource settings for early detection and prevention of ~~to prevent and diagnose~~ oral cancer at an early stage. The Oral Cancer Control Program uses a Mobile Health (mHealth) module by which FHPs connect to specialists through a mobile app to capture data and images of oral abnormalities in resource-constrained settings. The platform enables the creation of electronic health records and facilitates screening for Oral Cancer. To strengthen the government program, Community Based Assessment Checklist (CBAC) form will be used to collect information on risk habits and identify individuals at risk for oral cancer.

The overall survival of Indian patients with oral cancer is 20-25% lower than that reported for patients in developed countries. Diagnosis is often delayed in low resource settings, patients living in rural areas have poor access to primary health care, low health literacy, and problematic adherence to follow up. Diagnosis of oral cancer at an early stage offers the best chance for improved survival, decreased morbidity, and cost of treatment.

However, the conventional method of screening has a few limitations. Poor patient compliance for follow up is one of the main drawbacks, Rigid follow up to monitor the progression of Oral Potentially Malignant Disorders (OPMDs) is very critical in oral cancer program. The other limitations include lack of permanent portable record of data after screening, slow rates of information transfer and poor communication between primary provider and the specialist. The mHealth system provides a continuous two-way communication, enabling patient triaging and tracking. This interface helps to connect specialists with the patients for diagnosis. It also creates an opportunity for follow up and referrals. This unique approach has a robust surveillance to monitor high-risk groups in population- based and opportunistic screenings. The simple interface lends itself to effective data capture by health providers at all levels. The screening process is evidence-based, as every patient has a unique patient identity correlated with their habit history and clinically relevant photographs. The program aims at reducing oral cancer burden and financial liabilities for the patients and improving the treatment outcome. Started in 2011, the program aims to strengthen the current government health initiatives and has been successfully implemented in various resource-constrained settings in partnership with Governments of Karnataka, Rajasthan, Assam, and Nagaland. The program was designed to identify high-risk population in both community and workplace settings and aims to strengthen the current government health programs with implementation focusing on areas with high disease burden.

Workflow:

Summary:

Location - Tata Coffee Estate – Karadibetta, Hassan	
Date	14/02/22
Positive for Risk Habits	75 (55%)
Positive for suspicious lesions	23 (17%)
Oral Cancer	Nil
Total Participants screened	136

Oral Cancer Screening (OCS) was conducted at the Karadibetta Estate in Alur, Hassan. The screening was done on 14-02-2022. Trained Frontline Healthcare Providers (FHPs) performed oral visual examination for early detection of oral cancer and Oral Potentially Malignant Disorders (OPMDs).

FHPs performed oral visual examination followed by technology based (mHealth) screening. A total of 136 individuals participated in screening, out of which, 77 participants were enrolled for mHealth screening. Amongst the total targeted participants screened, 75 had positive habit history and lesion positive (OPMDs) in 23 (30%). Habit positive patients were referred for tobacco cessation clinics at PHCs and for further management. Education for oral hygiene maintenance, self-mouth examination and awareness was provided for all the participants. Toothpastes were distributed to all the participants to promote oral health hygiene. 75 individuals were recommended for follow up. Biopsies were carried out for 8 participants on 09/05/22.

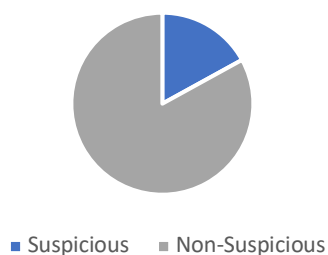

In addition to screening for oral cancer, screening program for breast cancer was also carried out. The total number of patients screened were 34. Of the total participants screened, 6 individuals were referred for Mammogram (MMG) & Ultrasonography (USG).

Conclusion:

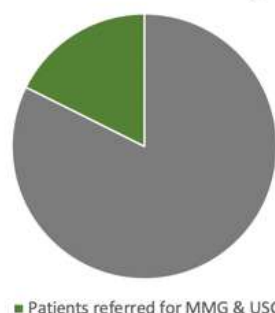

At Karadibetta Estate, 23 participants were identified as having OPMDs, 75 were identified as positive for risk habits and all risk individuals were recommended for follow up. Of the total participants screened for breast cancer, 6 patients were referred for MMG & USG.

Table and graphs showing demographic details, Suspicious and non-suspicious lesions, and details of oral and breast cancer screening

No. of suspicious and non-suspicious lesions

Breast Cancer Screening

Tata Coffee Estates – Ubban, Bage and Dythapura

Summary:

Location - Tata Coffee Estates in Ubban, Bage and Dythapura, Hassan	
Date	29-06-22 and 30-06-22
Positive for Risk Habits	238 (86.2%)
Positive for suspicious lesions	63 (23%)
Tobacco induced minor oral changes (Paan chewers mucosa)	36
Oral Cancer	Nil
Total Participants screened	276

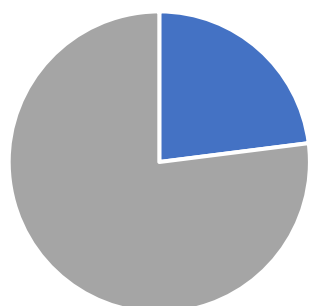

Oral Cancer Screening (OCS) was conducted at the Tata Coffee Estates in Ubban, Bage and Dythapura. The screening was done on 29th and 30th June 2022. Trained Frontline Healthcare Providers (FHPs) performed oral visual examination followed by technology based (mHealth) for early detection of oral cancer and Oral Potentially Malignant Disorders (OPMDs).

The program included awareness talk by specialists on the ill-effects of chewing tobacco. The participants were counselled and encouraged to perform a self-mouth examination, and on the importance of habit cessation. A pledge was taken by the participants to quit the habit of tobacco and areca-nut use. The participants were educated with a short video to spread awareness on oral cancer and the harmful effects of tobacco on health.

FHPs screened a total of 276 individuals in three different cohorts followed by onsite specialist examination, out of which, 238 were positive for habits, 63 were identified as suspicious oral lesions (Oral Potentially Malignant Disorders) and 36 had tobacco-induced minor oral changes (Paan chewers mucosa). All risk individuals positive for habit and having oral mucosal lesions were referred for tobacco cessation clinics at PHCs and for further management. Education for oral hygiene maintenance, self-mouth examination and awareness was provided for all the participants. Toothpastes to all participants were distributed to promote oral health hygiene, and multivitamin capsules for risk individuals. 99 individuals were recommended for follow up. All the patients having suspicious oral lesions are advised for biopsy and standard treatment care will be provided

Additionally, surveillance of patients who had undergone biopsies on 09/05/22 was carried out at Karadibetta Estate, Hassan. Of the total 9 patients who had undergone biopsies, some patients have reduced the habit and 1 patient has quit the habit.

No. of suspicious and non-suspicious lesions

■ Suspicious ■ Non-Suspicious

Awareness talk on ill effects of tobacco and importance of early detection of oral cancer given to participants.

Tata Coffee Estate – Merthikhan

Summary:

Location - Tata Coffee Estates in Merthikhan, Balehonnur (Chikkmagaluru)	
Date	10-11-22 and 11-11-22
Positive for Risk Habits	87 (73%)
Positive for suspicious lesions	36 (30%)
Tobacco induced minor oral changes (Paan chewers mucosa)	28
Oral Cancer	Nil
Total Participants screened	119

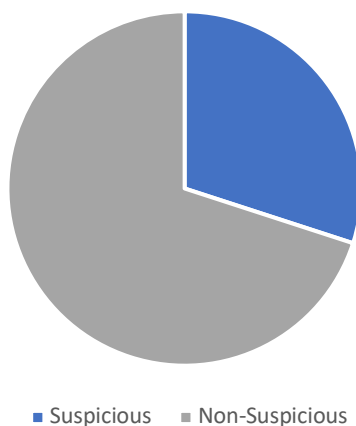

Oral Cancer Screening (OCS) program was conducted at the Tata Coffee Estates in Merthikhan, Balehonnur in Chikkmagaluru. The screening was done on 10th and 11th November, 2022. Trained Frontline Healthcare Providers (FHPs) performed oral visual examination followed by technology based (mHealth) for early detection of oral cancer and Oral Potentially Malignant Disorders (OPMDs).

An awareness talk was given by the specialist on the ill-effects of chewing tobacco and on the importance of quitting the habit. The participants were shown how to perform a self mouth examination and were encouraged for the same.

FHPs screened a total of 119 individuals, followed by onsite specialist examination, out of which, 87 were positive for habits, 36 were identified as suspicious oral lesions (Oral Potentially Malignant Disorders) and 28 had tobacco-induced minor oral changes (Paan chewers mucosa). All risk individuals positive for habit and having oral mucosal lesions were referred for tobacco cessation clinics at PHCs and for further management. Education for oral hygiene maintenance, self-mouth examination and awareness was provided for all the participants. 87 individuals were recommended for follow up.

Molecular cytology testing was carried out for 11 participants. All the patients having suspicious oral lesions are advised for biopsy and standard treatment care.

No. of suspicious and non-suspicious lesions

Molecular Cytology Testing by specialist

Continuation of Professional Development Program-Report

Date: 12th September 2022

Venue: KLES Institute of Dental Sciences

Title: Basic Life Support-2022

Event: Lecture and Hands-on Program

Program: Institution Program

Resource Person: Dr Tejas

Department: Department of Oral and Maxillofacial Surgery

Program Details:

BLS Training programme for graduated Interns were Organized by Department of Oral and Maxillofacial Surgery on 12/09/2022. Inauguration ceremony started at 9:30 am. Dr Ramdas Balakrishna delivered the welcome speech and introduced the resource person Dr Tejas, Anesthetist and Certified BLS trainer, to the gathering.

Dr Tejas addressed the gathering about "BASIC LIFE SUPPORT" and its use in dentistry. The programme was attended by Dr Praveen, Professor and Head, Dept of OMRD, Dr Madhu, Professor and Head, Dept of Paedodontics and Preventive Dentistry, Dr Rohit M Shetty, Professor and Head, Dept of Prosthodontics and Dr Shivarajan, Reader at the Department of Conservative Dentistry and Endodontics had enrolled as the trainee along with Interns and First year PG students of Department of OMFS for the program. Dr Sudarshan, Professor, Dept of oral and maxillofacial surgery delivered vote of thanks.

15 mannequins and bag valve masks (ambu bags) were arranged for the programme. A total of 35 participants were present. The delegates performed CPR under the guidance of faculty members of Dept Of OMFS. The programme intended to provide advanced training to Interns.

The program ended with distribution of certificates. Efforts of OMFS Dept. in this program was well appreciated by all participants with positive feedback.
